Week 2 Business Analytics Case Study

Prepared By: Christina Sebueng
Dataset: Global Superstore Dataset

Section A : Five Key Business Insights

Insight 1: The Central Region Leads in Sales
Performance The Sales by Region chart reveal that the Central region generates the highest sales revenue compared to all other regions. This indicates that the Central region has a strong customer baseand effective sales operations. Management should investigate what is driving this success and apply similar strategies to underperforming regions.

Insight 2: Technology is the Most Prifitable Product Category
The Profit by Category confirms that the Technology category generate the highest profit among all three products categories (Technology, Furniture, and Office Supplies). This suggests that the technology products carry a higher profit margins and are in strong demand across customer segments.

Insight 3: Consumer Segment Dominates Revenue Contribution
The Sales by segment column chart shows that the Consumer segment contributes the most revenue, outperforming both the Corporate and House Office Segments. This highlights that the business is heavily reliant on individual consumers as its primary revenue driver.

Insight 4: Declining Sales Trend Over Time
The Sales Trend line chart indicates a declining pattern in sales over the years. This is a concerning signal that requires immediate management attention. Possible causes included increased competition, customer churn, or addressed marketing strategies that need to be addressed urgently.

Insight 5: Technology Categories Accounts for the Largest Share of Sales
The Donut Chart confirms that the Technology category accounts for the largest proportion of total sale across all product categories. This reinforces the importance of the Technology segment to the overall business and suggests that continued investments in this category is critical in this category is critical to sustaining revenue.

Section B: Three Business Risks

Risk 1: Over-reliance on a Single Region

The business is heavily dependent on the Central region for sales performance. If this region experinces an economic downturn, natural disaster, or increased local competition, overall business revenue could be significantly impacted. Diversification of sale across all regions is essential to mitigate this risk.

Risk 2: Declining Sales Trend

The consistent declcine in sales over the years poses a serious risk to the long-term sustainability of the business. Without intervention, this trend could lead to a reduced profitability, cash flow challenges, and potential business losses. Immediate action is required to reverse this trend.

Risk 3: Low Perfomance in Non-Technology Categories

The dominance of Technology in both sales and profit suggests that Furniture and Office Supplies are underperforming. Over-reliance on a single category exposes the business to significant risk if demand for technology products declines or supply chain disruptions occur.

Section C: Three Business Opportunities

Opportunity 1: Expand into underperfoming Regions

Since the Central Region is leading in sales, there is an opportunity to replicate its success strategy in other regions. Targeted marketing campaigns, regional promotions, and localised pricing strategies could unlock significant revenue growth in currently underperfoming regions.

Opportunity 2: Grow the Coporate and Home Office Segement

While the Consuer segment currently dominates, the Corporate and Home Office segments represents untapped growth potential. Developing tailored product bundles, loyalty programmes, and dedicated account management for these segments could significantly increase their revenue contribution.

Opportunity 3: Revitalise Furniture and Office Supplies Categories

Given that Technology dominates sales and profit theres is an opportunity to improve the perfomance of Furniture and Office Supplies through promotional pricing, product bundling with technology items, and targeted marketing campaigns. IMproving these categoris would diversify revenue streams and reduce category concentration risk.
